19 1/2" High

12" Wide

13 1/2" Deep

In Wall Box Dimensions:

88" High

14 1/4" Wide

3 1/2" Deep

Most subwoofers deliver slow, boomy, bass because they are made from paper or inferior plastic. At **Newport Audio**, we believe in speed and accuracy, and we achieve this through the use of superior engineering and materials.

To deliver our acoustically accurate bass reproduction, we start with the baffle. While the industry standard is plastic, all of our baffles are milled aluminum. The weight and rigidity of the aluminum is essential for the delivery of tight, accurate bass.

The **Newport Audio GOLD SERIES Subwoofer** houses our proprietary dual 8.5" curvilinear aluminum drivers with an inverse mounted neodymium magnet structure. This unique configuration allows us to drastically increase our driver's excursion, while still being able to fit in a standard 2X4 stud wall. This configuration translates to unrivaled performance and unmatched output.
